https://commons.wikimedia.org/wiki/File:The_misty_mountains.jpg

BEGINNING MY STUDIES.

BEGINNING my studies the first step pleas'd me so much,
The mere fact consciousness, these forms, the power of motion,
The least insect or animal, the senses, eyesight, love,
The first step I say awed me and pleas'd me so much,
I have hardly gone and hardly wish'd to go any farther,
But stop and loiter all the time to sing it in ecstatic songs.

Walt Whitman, *Leaves of Grass* (1881)

<https://whitmanarchive.org/published/LG/1881/poems/11>

My general formula for my students is "Follow your bliss." Find where it is, and don't be afraid to follow it.

-- Joseph Campbell
(p. 148)

Welcome

Welcome to the HKUST Library!

This guide aims to help you make the most of the Library in your first year at HKUST. It presents you with key library resources, services, and facilities.

The Library has a variety of facilities and flexible space equipped with technology to facilitate learning.

- Take a [Self-Guided online Tour](#)
- View [Facilities details](#).

Learning Commons (LC) on LG1 opens 24x7 during term time. It also has the [Creative Media Zone](#) which as a graphics workshop, AV Editing Suites, and even a Video Studio.

Check out the [Services & Information](#) about LC.

Contact Us

Ask a Librarian for help on

- Assistance on finding the right books, articles, databases, internet resources, etc.
- Guidelines on the right direction for an assignment

WhatsApp (9701-1055)

United Nations: Save our planet by protecting migratory birds and their 'epic journeys', urges UN chief

Asia News Monitor, Bangkok (Bangkok) 14 May 2018.

Full text Details

Tuesday

As they make their global journeys, migratory birds not only set birdwatchers' binoculars aflutter, they also help the planet maintain its essential ecological balance. That's one of the key messages from United Nations chief Antonio Guterres, for World Migratory Bird Day, celebrated on Saturday, with the soaring message: Unifying Our Voices for Bird Conservation.

Migratory birds connect people, ecosystems and nations. They are symbols of peace and of an interconnected planet, Secretary-General Antonio Guterres said in a statement to mark the Day.

Their epic journeys inspire people of all ages, across the globe, he continued, adding, World Migratory Bird Day is an opportunity to celebrate the great natural wonder of bird migration - but also a reminder that those patterns, and ecosystems worldwide, are threatened by climate change.

The Day highlights the need to conserve migratory birds and their habitats by raising awareness of the threats they face, their ecological importance and the need for international cooperation to conserve them.

Migratory birds fly hundreds and thousands of kilometers, along historic routes, to find the best habitats available for feeding, breeding and raising their young. The perilous journeys involve a wide and diverse array of threats.

Of the 11,000 bird species on the planet, one-in-five is considered migratory. Forty per cent of them are in decline, with one-in-eight under threat of global extinction. Major threats include habitat loss and degradation, caused by agricultural and coastal development; collision with badly placed wind turbines and powerlines; unsustainable harvesting, and illegal killing and taking.

Migratory birds are also greatly affected by poisoning, such as through ingesting lead released into the environment, through spent ammunition, or toxic weights used for fishing.

Migratory birds are under threat from every corner: they are losing their habitats, subjected to illegal killing and suffering from the impacts of climate change, said Erik Solheim, Executive Director of the UN Environment Programme, UNEP, adding that we all have a responsibility to save such a precious component of the natural world.

By protecting them, we protect our planet.

Key supporters and partners globally are adamant that successful migratory bird conservation can only be achieved through a united effort.

Beginning this year, World Migratory Bird Day will be observed annually each May and October, to coincide with the cycle of migration, making it possible to organize events in countries around the world at peak migration times.

1. UN Environment and news agencies to hold a concerted conservation action that will help to ensure the birds' survival - and our own, the Secretary-General said.

ARTICLE

Neutrinos from the primary proton-proton fusion process in the Sun

Research Collaboration*

In the core of the Sun, energy is released through sequences of nuclear reactions that convert hydrogen into helium. The primary reaction is thought to be the fusion of two protons with the emission of a low-energy neutrino. These so-called pp-neutrinos constitute nearly the entirety of the solar neutrino flux, nearly unambiguously those emitted in the reactions that follow. Although solar neutrinos from secondary processes have been observed, proving the nuclear origin of the Sun's energy and contributing to the discovery of neutrino oscillations, these low-energy proton-proton fusion have hitherto eluded direct detection. Here we report spectral observations of pp-neutrinos, demonstrating that about 90 per cent of the power of the Sun, 3.84×10^{26} W, is generated by the proton-proton fusion process.

We have known for 75 years that the energy generated by stars comes from the fusion of light nuclei into heavier ones¹. In the Sun, hydrogen is transformed into helium predominantly via the pp cycle², a chain of nuclear reactions releasing 26.73 MeV and electron neutrinos ν_e and positrons e^+ .

$$p + p \rightarrow d + e^+ + \nu_e$$

The cycle begins with the fusion of two protons into a deuteron, which occurs 99.98% of the time³ by means of the primary reaction

$$p + p \rightarrow d + e^+ + \nu_e$$

Neutrinos produced in this step are referred to as pp-neutrinos. Some of the nuclear reactions that follow also produce neutrinos of various energies. To measure the flux of neutrinos from the pp-neutrino step, we designed an experiment to detect pp-neutrinos in real time, but to a precision of about 1% of the Sun's energy⁴. Proton-proton fusion⁵ produces the low-energy neutrinos of interest, which are produced by the fusion of two protons into a deuteron, which occurs 99.98% of the time³ by means of the primary reaction

$$p + p \rightarrow d + e^+ + \nu_e$$

The theoretical prediction for the flux of pp-neutrinos is 6.1×10^{11} cm⁻² s⁻¹ at Earth⁶. However, by measuring only an integrated flux of all neutrinos above an energy threshold of 0.1 MeV, the pp-neutrino flux could be extracted only indirectly, by combining the GALLEX and SAGE measurements with those of other experiments^{7,8}.

The Borexino experiment came online in 2007 with high sensitivity to all solar neutrino components, particularly those below 2 MeV (Fig. 1). It has been the most sensitive solar neutrino experiment to date, and the only one to measure the pp-neutrino flux directly. The pp-neutrino flux is calculated on the basis of the measured flux of pp-neutrinos and the theoretical prediction for the flux of pp-neutrinos. The pp-neutrino flux is calculated on the basis of the measured flux of pp-neutrinos and the theoretical prediction for the flux of pp-neutrinos.

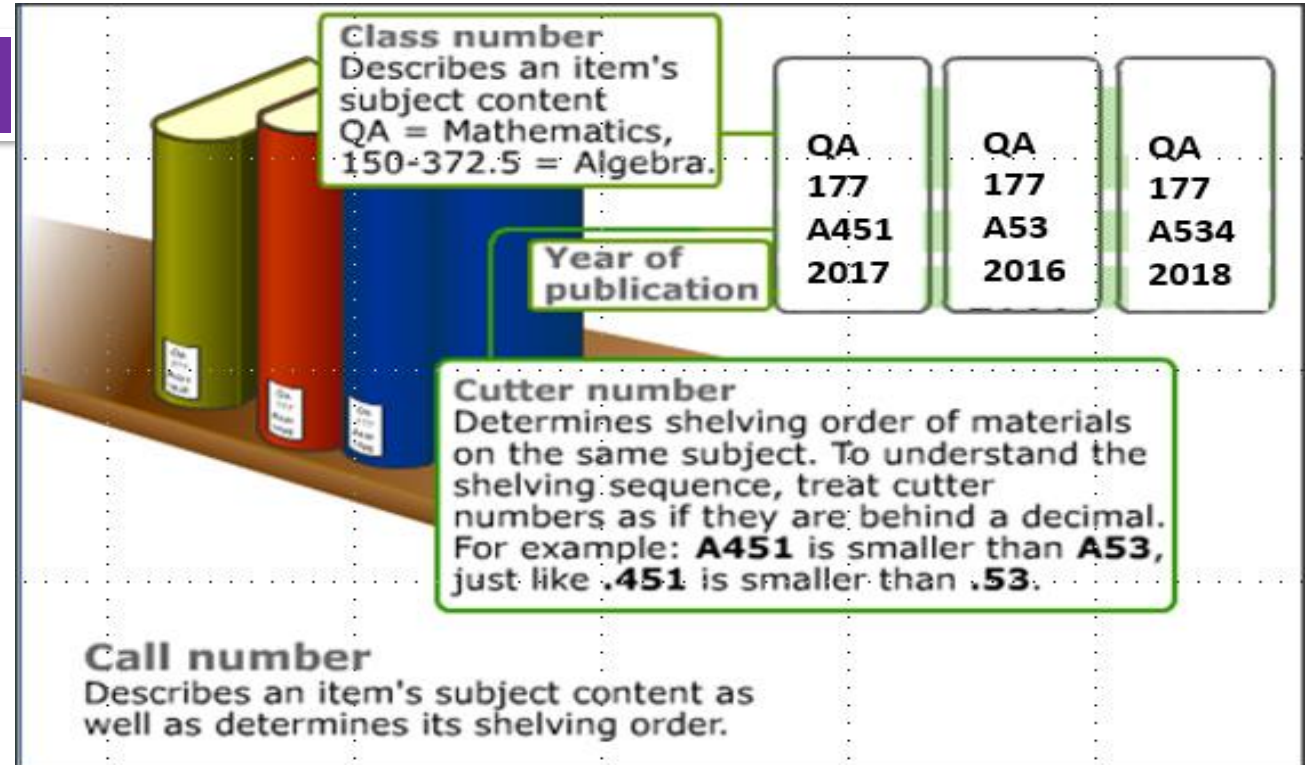

Skill Set 1: Find a Book/DVD

Search for a book, magazine, or DVD by Title:

- Search **Library Catalog** only (uncheck Articles+)
- Book/DVD title (e.g. K pop popular music / Coco / Along with the gods)
- Magazine (e.g. Time , 選擇)

What is a Call Number?

- E.g. QA177 A451 2017
- Shelf Address
- Describes the [subject content](#)

Skill Set 1: Effective Book Search (a)

Find this book:

- Un-tick Articles +
- Type title key words: **Tesla inventor**
- Choose “search”

Skill Set 4: Reserve a Room (b)

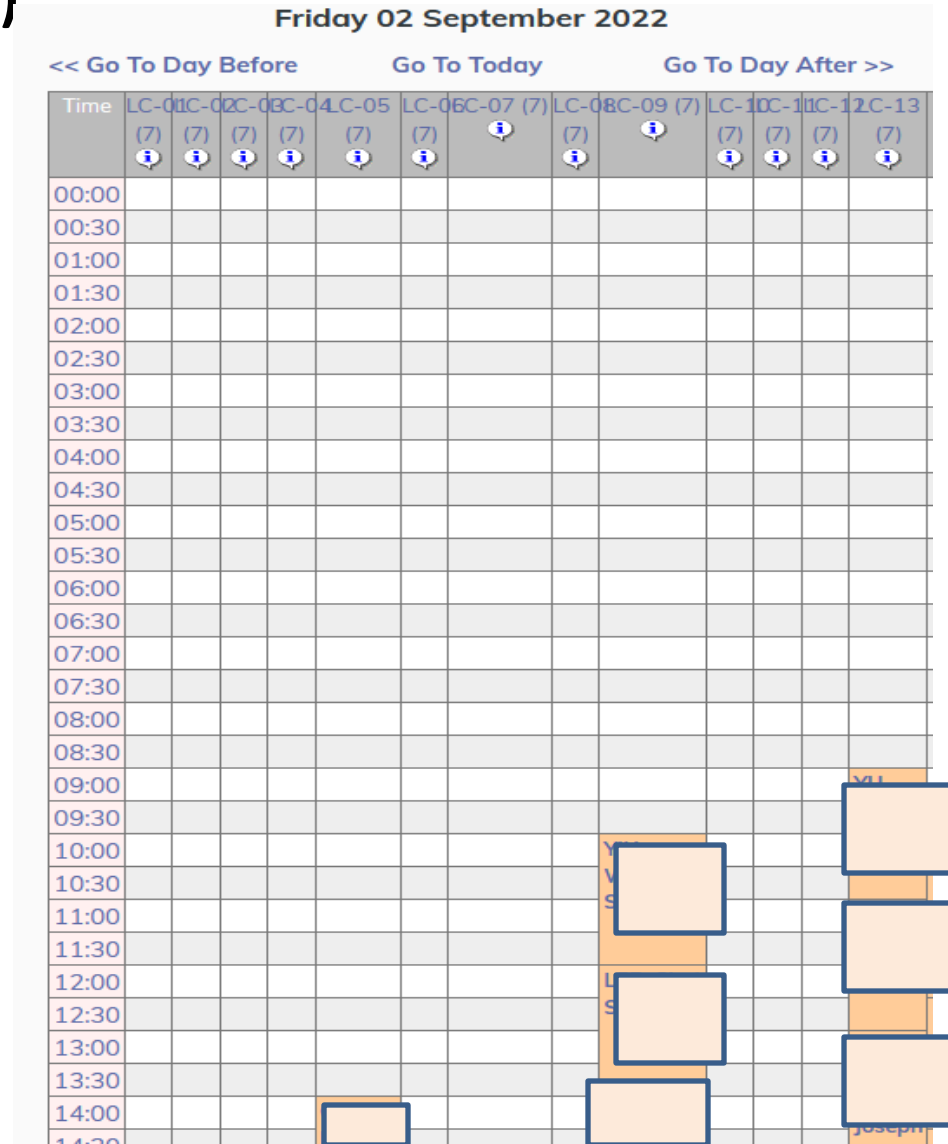

These rules apply to Group Study Rooms, LG3 Seminar Room, Media & Discussion Rooms, IC Learning Space, and AV Editing Suites. Violators may be blocked from further room booking.

1. The rooms are for group use by HKUST staff and students only. Individuals should study in other locations.
2. Rooms that are not reserved are available on a first-come-first-served basis.
3. Each group can book up to 2 hours per session, 1 session per day, 2 sessions per week, all rooms combined.
4. Reservation may be made on the same day or at most 2 weeks in advance.
5. If your group is more than 10 minutes late, the reservation is no longer in force and another group can take the room for the rest of that booking.
6. At least 2 persons must be present at all time during a session. If only 1 person is in the room for more than 10 minutes in the middle of a session, another group may take the room for the remaining time of that session.
